

Marcos Alvarez

Information Systems & Tech | Business Intelligence & Analytics

Core Focus: Data Modeling, IT Infrastructure Automation, and Analytical Pipelines.

Professional Experience

IT Support Associate II

Amazon Robotics Sort Center

Infrastructure & Operations Governance

Engineered rapid remediation strategies for complex hardware and network infrastructure anomalies, maintaining an elite SLA resolution rate to guarantee operational continuity for high-throughput fulfillment systems.

Governed local IT infrastructure lifecycle management, auditing and provisioning thousands of critical enterprise endpoints to eliminate hardware bottlenecks and optimize capital allocation.

Diagnosed and resolved complex routing and latency anomalies, applying foundational networking principles (TCP/IP, DNS, Subnetting) to optimize infrastructure performance under heavy concurrent loads.

Project Management & Technical Leadership

Orchestrated complex, site-wide infrastructure migration and upgrade projects, managing full-lifecycle deployment from initial scope to successful technical resolution.

Delegated technical milestones to cross-functional team members, establishing accountability frameworks and conducting weekly project audits to ensure on-time delivery under strict operational deadlines.

Maintained quantitative and qualitative performance telemetry, documenting measurable business impact, infrastructural cost-savings, and process optimizations for senior leadership review.

Vendor & Escalation Management

Spearheaded technical escalation management for high-stakes operational incidents, translating chaotic system failures into structured root-cause analyses for site leadership and cross-functional regional teams.

Managed vendor relationships and procurement pipelines, auditing complex technical quotes and coordinating external vendor deployments to optimize budget allocation for site hardware deployments.

Collaborated with cross-functional regional teams via synchronous and asynchronous communication channels to synchronize infrastructure deployment strategies and share cross-site engineering best practices.

IT Support Technician

Amazon Fulfillment Center

Diagnosed and resolved complex IT issues while performing routine maintenance. Provided comprehensive user support and technical guidance.

Technologies

Programming & Scripting:

- Assembly x86/C/C++: College classes, no real world experience yet.

Marcos Alvarez

Information Systems & Tech | Business Intelligence & Analytics

Core Focus: Data Modeling, IT Infrastructure Automation, and Analytical Pipelines.

- Java: College class, no real world experience yet.
- HTML/CSS/SQL/JS: Basic Web Development, now switched over to no-code solutions like Jules by Google.
- Python: Pandas and Numpy

Enterprise Tools & Platforms:

- Cin7 Inventory: Previously used in IT
- Oracle Fusion Cloud Inventory Management: Currently using at my current position.
- ServiceNow: Currently using at my current position.
- QuickSite: Currently using at my current position.

Other Technologies:

- Gemini: Daily life troubleshooting
- Office 365: Outlook, Excel, Word

Education

Bachelor of Science: Information Systems and Technology - Business Intelligence and Analytics

California State University San Bernardino | Status: In Progress

Associate of Science: Computer & Information Systems

Mt. San Jacinto College | Status: Completed
